MAIN CHARACTERISTICS

The TG02 printer is the ideal solution for:
- Gaming machines
- Economical kiosks
- Self-service machines
- Vending machines

is equipped with paper tear-off and anti-paper jam system and it is easy to install and to fasten on panel thanks to fireproof and shock resistant plastic frontal.

PRINTER DESCRIPTION

It is equipped with a 200 dpi thermal print mechanism that uses paper with a width of 57 mm; it has a TTL serial interface (optional RS232 cable) and is also equipped with a calendar clock (Real Time Clock).

The TG02 printer consists of a case (1) onto which the following components are fitted: thermal print mechanism (5), paper roll pin (8) front panel (4) in PPO for installation on Gaming/Vending Machines.

- When the "REPORT" key (6) is pressed, it prints the printer operational report.

- When the "FEED" key (7) is pressed, the paper can be fed forward manually.

- The red Status LED (3) displays a printer hardware error status. The check is carried out "on line", i.e. in the event of a malfunctioning, the LED will starts flashing as follows:
(Tab.1)

Status led	Description
Always OFF	Printer OFF
Always ON	Printer ON – no faults
Slow flashing (on for a long period)	Tilting cover raised

(Fig.1.2)

1.2.1 Configuration of REPORT and FEED keys

If, when the printer is switched on, both of the above-mentioned keys are held down, the printer enters configuration mode and prints the first modifiable parameter. At this point, each time the REPORT key is pressed, the parameter changes and its current value is printed. Once the desired value has been obtained, press the FEED key to proceed to the next parameter, and so on. Once all the parameters have been run through, the printing of a message signals the end of setting procedure.

1.3 AUTOTEST

To run the autotest, press the FEED key while switching on the printer. During the running of the autotest, the character fonts and logos stored inside the printer are printed.

1.4 CAUTIONS

WARNINGS
- Do not print without paper.
- Do not drag the carriage manually when the printer is on.
- Do not allow any foreign bodies to become trapped inside the printer.
- Safeguard all parts of the printer from blows, both during and subsequent to installation.

Hex	1B	44	n1...nk	00
Decimal	27	68	n1...nk	0

[Range]   1 ≤ n ≤ 255
0 ≤ k ≤ 32

[Description]   Sets horizontal tab positions
• n specifies the column number for setting a horizontal tab position calculated from the beginning of the line.
• k indicates the total number of horizontal tab positions to be set.

[Notes]   • The horizontal tab position is stored as a value of [character width x n] measured from the beginning of the line. The character width includes the right-side character spacing and double-width characters are set with twice the width of normal characters.
• This command cancels previous tab settings.
• When setting n = 8, the print position is moved to column 9, by sending **$09.**
• Up to 32 tab positions (k = 32) can be set. Data exceeding 32 tab positions is processed as normal data.
• Send [n] k in ascending order and place a 0 NUL code at the end. When [n] k is less than or equal to the preceding value [n] k-1, the setting is complete and the data which follows is processed as normal data.
• **$1B $44 $00** cancels all horizontal tab positions.
• The previously specified horizontal tab position does not change, even if the character width is modified.

[Default]   Default tab positions are set at intervals of 8 characters (columns 9, 17, 25, …) when the right-side character spacing is 0.

To connect the printer with the RS232 interface use this connection cable and proceed as follows:

- connect the cable RJ45 connector to the J9 connector located at the back of the printer (see fig. A.2);
- connect the 9-pin female connector (fig. A.2) to the serial port.

(Fig.A.2)

For the layout of signals on the connectors, please refer to tables A.2 and A.3.
